OUTLOOK AND STRATEGY

Market Review. The Philippine fixed income market experienced a relatively stable month in March 2025, with modest movements in yields and continued investor interest in government securities. The BPI Philippine Government Money Market Index returned 0.41% for the month even as rates on the short-end crept higher by 4.58 bps on average. Both domestic and international factors, including central bank policies, inflation trends, and geopolitical developments affected yield movements for the period.

The Bangko Sentral ng Pilipinas (BSP) kept its key policy rate at 5.75%, citing the need to balance inflation control with economic growth. Inflation for the month of February remained within the target range at 2.1.% year-on-year, although there were concerns about potential upward pressures from global commodity prices.

Demand for government securities remained strong, particularly for short to medium-term bonds. The Bureau of the Treasury successfully auctioned off several tranches of Treasury bills, with yields awarded slightly lower than the previous month. Demand was quite healthy with oversubscriptions seen across all tenors. Overall market sentiment was positive, supported by stable macroeconomic indicators and a favorable investment climate. Nonetheless, investors remained cautious amid the potential impact of US President Trump's tariffs on growth and inflation.

Fund Performance. The Fund returned 0.31% for the month, underperforming its benchmark by 9 basis point. Year-to-date, return amounted to 0.99%, underperforming its benchmark by 29 basis points.

Fund Strategy. The Fund looks to gradually increase its duration position as interest rates are expected to fall over the next few months. Local inflation has settled within the BSP's target in the past months and is expected to be manageable. After easing its policy rates by 75 basis points in 2024, the BSP remains vigilant in monitoring inflation figures before easing rates further. Volatility may persist in the near term driven by global factors, and the portfolio will be actively managed to take advantage of this. Investors in the bond fund must be prepared to withstand volatility as higher investment value is normally achieved over the medium- to long-term horizon.
